Colour Temperature

It is important to think about your light source when buying your lamps. LED light source is measured by brightness and colour temperature which dictates how cool or warm the light is. As an example, a spot light is normally much brighter in comparison to the light given by a candle light.

To the right is an example of the light sources. All of the LED light sources quoted in our catalogue are within a tolerance of +/- 10%.

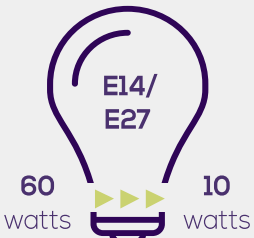

3000K WARM WHITE

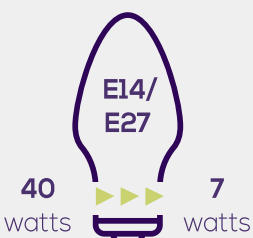

4000K COOL WHITE
